JOSEPH ALBERT LINTNER

In the sudden death of this prominent entomologist at Rome, Italy, on May 5, 1898, the scientific world sustained a great loss. Joseph Albert Lintner, Ph. D., was born in Schoharie, N. Y., Feb. 8, 1822, of German parentage. He attended Jefferson academy and was graduated from the Schoharie academy in 1837. For 10 years he was in business in New York city, and at the same time continued his studies under the Mercantile library association, also contributing scientific articles to the *New York tribune*. Returning to Schoharie in 1848, he engaged anew in business till 1860, when he removed to Utica and there manufactured woolen goods for some years. His scientific studies were continued unremittingly. His large collection of insects was begun in 1853 and in 1862 his first article on entomology was published. In 1868 he became zoological assistant in the state museum, and was put in charge of the entomologic work in 1874. He was appointed state entomologist by Governor Cornell in 1880, a position held till his death, and in 1883 was made by the regents a member of the scientific staff of the state museum.

This long and faithful service in his chosen field made him a valued and respected leader among economic entomologists. The last 36 years of his life were devoted almost entirely to entomology, and he wrote during that time over 900 independent articles, besides his 13 reports and the four numbers of *Entomological contributions*. In 1871 he began to contribute articles on economic entomology to the *Cultivator and country gentleman*, a leading agricultural paper now known as the *Country gentleman*, and was its entomological editor during the last 25 years. He has also written many notices for a number of other agricultural and horticultural papers. Although his publications were numerous and varied, it was their writer's ambition to make his communications of practical value to all. It was his delight to include something new or of more than ordinary interest in every notice of an insect. For the past 18 years he was widely known as a most earnest and conscientious state entomologist. His reports, replete with valuable and practical information, are enduring monuments to their author. In simplicity of language, dignity of expression, conciseness and thoroughness of treatment, they are models.

The high appreciation won from his colaborers is strikingly shown in the following extract^a from an address delivered in 1894 before the Association of economic entomologists by the president, Dr L. O. Howard,

^a *Insect life*. 1894. 7: 63

now chief of the division of entomology, of the United States department of agriculture:

The movement which resulted in the passage of this law^a was started by the regents of the University of the State of New York at their annual meeting in 1877, and the person appointed to fill the office was Dr J. A. Lintner, a well-known worker in entomology, who, up to that time, had been connected with the state museum of natural history. Dr Lintner has held office continuously since 1881. He brought to bear upon his duties a ripe experience and a mind trained in scientific methods. He has published nine reports, the last one covering the year 1892, and only recently distributed. These reports are in many respects models. The great care and thoroughness of the author have hardly been equalled by any other writer upon economic entomology. The form of the reports is most admirable, and the account of each insect forms almost invariably a complete compendium of our knowledge concerning it down to the date of publication. His accounts are also arranged in the most convenient form for reference, a full bibliography precedes the consideration of each species, and the frequent subheadings enable the most practical use of the report. The reports are replete with sound and ingenious practical suggestions, and are written in a straightforward, simple style, which possesses great literary merit. They abound in illustrations, and are made available by most complete indices and tables of contents. Aside from these reports, Dr Lintner has published a great deal in the newspapers, particularly the *Country gentleman*, on the subject of economic entomology, and another valuable feature of his reports is the comprehensive list which he publishes each year of his unofficial writings.

Without the magnificent opportunities our universities are offering today, this life shows in the highest degree the results of patient effort supplemented by untiring perseverance. Although prohibited by circumstances from devoting his whole time to scientific pursuits till late in life, his great love for nature enabled him to attain one of the highest positions in his chosen work. In 1884 the honorary degree of doctor of philosophy was conferred on him by the regents of the University of the State of New York. He was president of the Entomological club of the American association for the advancement of science and the Association of economic entomologists, two years each, and was president of the department of natural science of the Albany institute from 1879 till his death. He was elected to membership not only in learned societies in this country, but many of those abroad were proud to enroll his name on their books, as may be seen by the appended list of memberships held at the time of his decease. A short time before his death he was granted a six months' leave of absence by the regents in recognition of his long and faithful services.

^aLaws of 1881, ch. 377. The original appointment was made by Governor Cornell in 1880, under authority of ch. 549 of the laws of that year.

Modest and unassuming, gentle, yet never yielding to imposition, kind and loved by all, the name of Joseph Albert Lintner shines with a luster that places it beside those of Harris, Fitch, Walsh, LeBaron and Riley.

BIBLIOGRAPHY OF THE ENTOMOLOGIC PUBLICATIONS

OF

Joseph Albert Lintner, Ph. D.

The highly commendable practice of the late Dr J. A. Lintner in giving lists of his papers together with place, date of publication and summary of contents, has reduced to a minimum the labor of preparing this bibliography of his writings. In bringing these titles together, it has been my aim to render the greatest value with the least repetition. The extended summaries included in the original lists have been abridged, only the names of the more important species being retained.

The synonymy indicated is based largely on that adopted by Dr Lintner in his index of reports 1-10, which was published in 1896.

Metamorphoses of *Ceratonia quadricornis* Harris [*amyntor* Hübn.] (Entomological society of Philadelphia. Proceedings. 1862. 1: 286-93) Also, separate, with cover and half title page, December 1862.

Index to entomologist's reports 1-13 and to supplement of 14

This index is an extension, with modifications, of Dr Lintner's index to reports 1-10. References are given under preferred scientific names. The synonyms used in the text of preceding reports are placed in curves after the name or where there is simply a change in genus or species, the old term alone is given, preceded in the case of specific names by the initial for the genus. The synonymy given applies only to the publications indexed. In the case of reports 13 and 14 the superior figures tell the exact place on the page in ninths; e. g. 13:342⁷, means 13th report, page 342 beginning in the seventh ninth of the page, i. e. a little over two thirds of the way down.
